## Briggs Program Rain 10-12 Control Panel

The Briggs Program Rain 10-12 control panel ensures an even application rate by providing precise control of the retraction speed during the run regardless of changes in ground conditions, drum diameter and pressure. It also gives automatic shut down of the machine if the speed is not maintained to the correct level, if the pressure drops too low, or if the machine has finished the irrigation cycle. The controller is fitted and programmed completely by us and uses only magnetic sensors rather than solenoid valves and micro switches to ensure long term reliability.

### The main features are listed below

1. Precise speed control throughout the run resulting in extremely even application rate.
2. Real time clock and time for the run to finish shown on display screen.
3. Application rate (in mm) is shown on the display.
4. Delayed start (pre-irrigation) or delayed end (post-irrigation).
5. Up to 4 speed settings in one run (zone irrigation)
6. Total hours worked accumulator shown in the display.
7. Set speed and actual speed shown in the display.
8. Solar panel to keep the battery charged for the whole season.
9. Battery voltage shown in the display.
10. Length of pipe laid down shown in the display.
11. Start up on a built in timer facility.
12. Automatic shutdown if actual speed is less than 70% of set speed.
13. Adjustable valve opening and closing times.
14. High or low pressure shut down facility.
15. Panel is mounted in a rot free polycarbonate lockable housing.
16. Facility to work with **Briggs Text Control & Alert System**.

The Royal Agricultural Society of England Gold Medal 1987.

BRIGGS IRRIGATION IS THE TRADING NAME OF BRIGGS (UK) LTD.
